

苔藓

MOSS

苔藓生长在气候严寒的针阔叶林混交地带的山上，每年以3至5毫米的速度生长，是驯鹿最喜吃的天然食料。使鹿等驯鹿方言发音为“昂靠”“勒乌特”。“昂靠”是生长在岩石上和土地上的苔藓，“勒乌特”是生长在树上的苔藓类植物。除此之外，驯鹿还喜欢吃嫩草、蘑菇、木耳、灵芝等。

Moss grows on the mountain in the cold mixed zone of coniferous and broad-leaved forests. It grows at a rate of 3 to 5 mm every year. It is the most favorite natural food for reindeer. The Liewenki language is pronounced as "Ongyo" and "Leute". "Ongyo" is the moss growing on rocks and land, and "Leute" is the moss growing on trees. In addition, reindeer also like to eat tender grass, mushrooms, agaric, ganoderma lucidum, etc.
